ASSOCIATES WITH BETA-2.

SUBCELULAR LOCATION: Type I membrane protein.

ISSUE SPECIFICITY: EXPRESSED MODERATELY ON WYELOMONOCYTIC CELL

ISSUE SPECIFICITY: EXPRESSED MODERATE BLOOD LEUKOCYTES AND STRONGLY ON

LINES AND SUBSETS OF PERIPHERAL BLOOD LEUKOCYTES AND STRONGLY ON

TISSUE-SPECIALZED CELLS, INCLUDING MACROPHAGES FOAM CELLS WITHIN

ATHEROSCLEROTIC PLAQUES, AND ON SPLENIC RED PULP WACROPHAGES.

DOMAIN: THE INTEGRIN LOMAIN (INSERT) IS A WHFA DOMAIN. INTEGRINS

WITH I-DOMAINS DO NOT UNDERGO PROTESSE CLEAVAGE.

SIMILARITY: BELONGS TO THE INTEGRIN ALPHA CHAIN FAMILY.

SIMILARITY: CONTAINS 7 FG-GAP REPEATS.

INTEGRINS WITH I-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.
SIMILARITY: BELOGGS TO THE INTEGRIN ALPHA CHAIN FAMILY.
SIMILARITY: CONTAINS 1 VWFA DOMAIN.
SIMILARITY: CONTAINS 7 FG-GAP REPEATS.
DATABAGE: NAME-PROW: NOTE-CD guide CD11b entry;

ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING. THE FINAL TISSUE FORM OF COLLAGEN XII MAY CONTAIN HOMOTRIMERS OF EITHER THE LONGER OR THE SHORTER ISOFORM OR COMBINATION OF LONG AND SHORT ISOFORM CHAINS. ONLY THE LONG VARIANT IS A PROTEOGLYCAN. THE LARGE ISOFORM HAS MORE RESTRICTED EXPRESSION IN EMBRYONIC TISSUE THAN
                                                                                                                                                                                                                                                               MEDLINE-92111862; PubMed=1918137; Yamada S.S., Shinomura T., Tanaka H., Yamagata M., Yamada K.M., Yamada S.S., Shinomura T., Tanaka H., Nishida Y., Obara M., Kimata K.B., The complete primary structure of type XII collagen shows a chimeric molecule with reiterated fibronectin type III motifs, von Willebrand factor A motifs, a domain homologous to a noncollagenous region of type IX collagen, and short collagenous domains with an Arg-Gly-Asp site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ALTERNATIVE SPLICING.

Earge and small splice variants of collagen XII: differential
expression and ligand binding.";
J. Cell Biol. 130:1005-1014(1995).
-1- FUNCTION: TYPE XII COLLAGEN INTERACTS WITH TYPE I COLLAGEN-
CONTAINING FIBRILS, THE COLL DOMAIN COULD BE ASSOCIATED WITH THE
SURFACE OF THE FIBRILS, AND THE COLL AND NC3 DOMAINS MAY BE
LOCALIZED IN THE PERIFIBRILLAR MATRIX.
-1- SUBJUNT: TRIMER OF IDEPTICAL CHAINS EACH CONTAINING 190 kDa OF
NONTRIPLE-HELICAL SEQUENCES.

"Murine complement C2 and factor B genomic and cDNA cloning reveals
different mechanisms for multiple transcripts of C2 and B.";
J. Biol. Chem. 265:19040-19046(1990)

-1- FUNCTION: COMPONENT C2 WHICH IS PART OF THE CLASSICAL PATHWAY OF
THE COMPLEMENT SYSTEM IS CLEAVED BY ACTIVATED FACTOR C1 INTO TWO
THE COMPLEMENT C2B AND C2A. C2A. A SERINE PROTEASE, THEN COMBINES WITH
COMPLEMENT FACTOR 4B TO GENERATE THE C3 OR C5 CONVERTASE.

-1- CATALYTIC ACTIVITY: CLEAVES C3 IN THE ALPHA-CHAIN TO YIELD C3A AND
C13B. CLEAVAGES TAKE PLACE AT THE C-TERMINAL OF AN ARGININE RESIDUE.
-1- MISCELLANBOUS: C2 IS A MAJOR HISTOCOMPATIBILITY COMPLEX CLASS-III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -!- SIMILARITY: WITH COMPLEMENT FACTOR B.
-!- SIMILARITY: CONTAINS 3 SUSHI (SCR) DOMAINS.
-!- SIMILARITY: CONTAINS 1 WHAS DOMAINS.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE
                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.
                                                           01.MAX-1991 (Rel. 18, Created)
U-MAX-1991 (Rel. 18, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Complement C2 precursor (EC 3.4.21.43) (C3/C5 convertase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAA37380.1) JOINED.

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Exploration Research Group in RIKEN.

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGGAGAGGGTCTTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot - 7.5 and subtraction to Rot = 37.5. Second strand cDNA was prepared with the primer adapter.
